Tumor And Tumor Markers Breast Tumors Volume1: Tumor And Tumor Markers

Synopsis

Markers produced by cancers include enzymes and isoenzymes, hormones, oncofetal antigens, carbohydrate epitopes recognized by monoclonal antibodies, receptors, and oncogene products. Enzymes were of the first groups of tumor markers identified. Their elevated activities were used to indicate the presence of cancer. Hormones as tumor markers were used for the detection and monitoring of cancer. Oncofetal antigens were discovered using conventional antisera produced against fluids from cancer-bearing animals or extracts of cancer tissues. The development of monoclonal antibody techniques allowed more sensitive and specific measurements of tumor antigens. More importantly, new antigens were discovered by developing monoclonal antibodies against tumor cell preparations. They appear to have better clinical sensitivity and specificity than do the oncofetal antigens.

Book Information

Series: Tumor Markers

Paperback: 508 pages

Publisher: CreateSpace Independent Publishing Platform; 1 edition (August 18, 2016)

Language: English

ISBN-10: 1537151509

ISBN-13: 978-1537151502

Product Dimensions: 8.5 x 1.2 x 11 inches

Shipping Weight: 3.2 pounds (View shipping rates and policies)
